

HOW TO APPLY VINYL NAIL DECALS

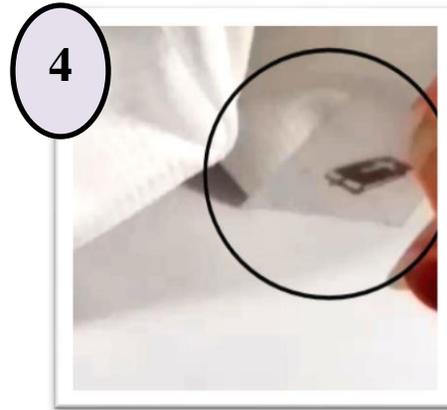

1 Apply desired color to nail and allow to dry. Make sure there are no oils or lotions on nails. Select which decal you want to use and cut out a square around the decal.

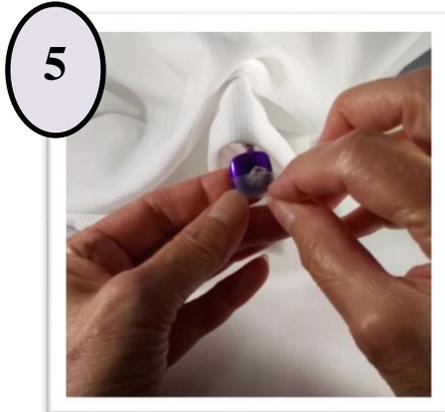

2 Peel back the clear transfer layer and your decal should be adhered to the clear layer.

3 If your vinyl decal is not adhered to the transfer layer, you may use the applicator to firmly rub over them until the vinyl decal is adhered.

4 The clear transfer layer can then be peeled back and the decal should be adhered. Check the position where you want it on the nail.

5 Once you have chosen where you want the decal, place the decal with the transfer layer on the nail, and rub over with finger.

6 Your decal is now attached! Coat nail with two clear topcoats and let dry. Decal should stay in place for approximately 2 weeks.
Removal: Decals can be removed with nail polish remover.
